Street Tree Planting Preferred Species List

Introduction

The Street Tree Planting – Preferred Species List was developed to provide a list of suitable tree species for planting within the Macedon Ranges Shire Council (MRSC) area.

The Street Tree Planting – Preferred Species List has been compiled with consideration to aesthetic, functional and biological tree attributes, in conjunction with existing site conditions, site suitability, landscape character and projected climate change. Varying microclimates and growing conditions across MRSC mean that not all species on this list are suitable in all situations. A Street Tree Planting Matrix has been created to guide decision making and ensure selection of ‘the right tree, in the right place’.

Councils Arboriculture team are able to provide site specific advice on street tree species selection.

Council may also trial tree species which are not included on this list in order to determine their suitability for future inclusion on the preferred species list.
